

MSG 178 - BLUE FD13 MISSION SUMMARY

Good morning Willie, Mike & Dave....good night Rick, KC, Ilan & Laurel. You folks are havin' too much fun! We've had many comments from the entire ground team that you are all so easy to work with. Enjoy your morning off.

The FREESTAR POCC is a happy place to be right now. Many thanks for two more terrific SOLSE observations. Tammy says you've all earned some more of her famous caramel and astronaut cookies -- expect a delivery following the mission! During the second SOLSE view we operated MEIDEX simultaneously and the payloads are anxious to compare notes. For MEIDEX, it looks like we're starting to get a little more dust. Better late than never is our motto. Thanks for your diligence in tracking it! To top it all off ... LPT, SOLCON and CVX are still doing great.

Mist is struggling a little right now, but the poem was already created. Here it goes:
Now that the Flameball family is complete,
We'll be spraying Mist at their feet.
The PhAB4 vampires have come back,
But by now you have the knack.
So with several more days to go,
We'll be watching the Mist flow...
